The Fuel Adjustment is a line item on your monthly electric bill. It serves as a mechanism that allows utilities to adjust the price of electricity to reflect fluctuations in the cost of fuel and other expenses related to power generation and delivery, including transmission costs.

Why the Fuel Adjustment Changes

- Grid power costs go up when solar is down (clouds, weather, maintenance).
- Excess solar is sold — and you get a credit!
- KCEC doesn't profit from this charge — ever.
- Increase in transmission cost.

As your cooperative, we're committed to transparency and fairness. Every dollar of the Fuel Adjustment goes directly to covering actual power costs — nothing more.
